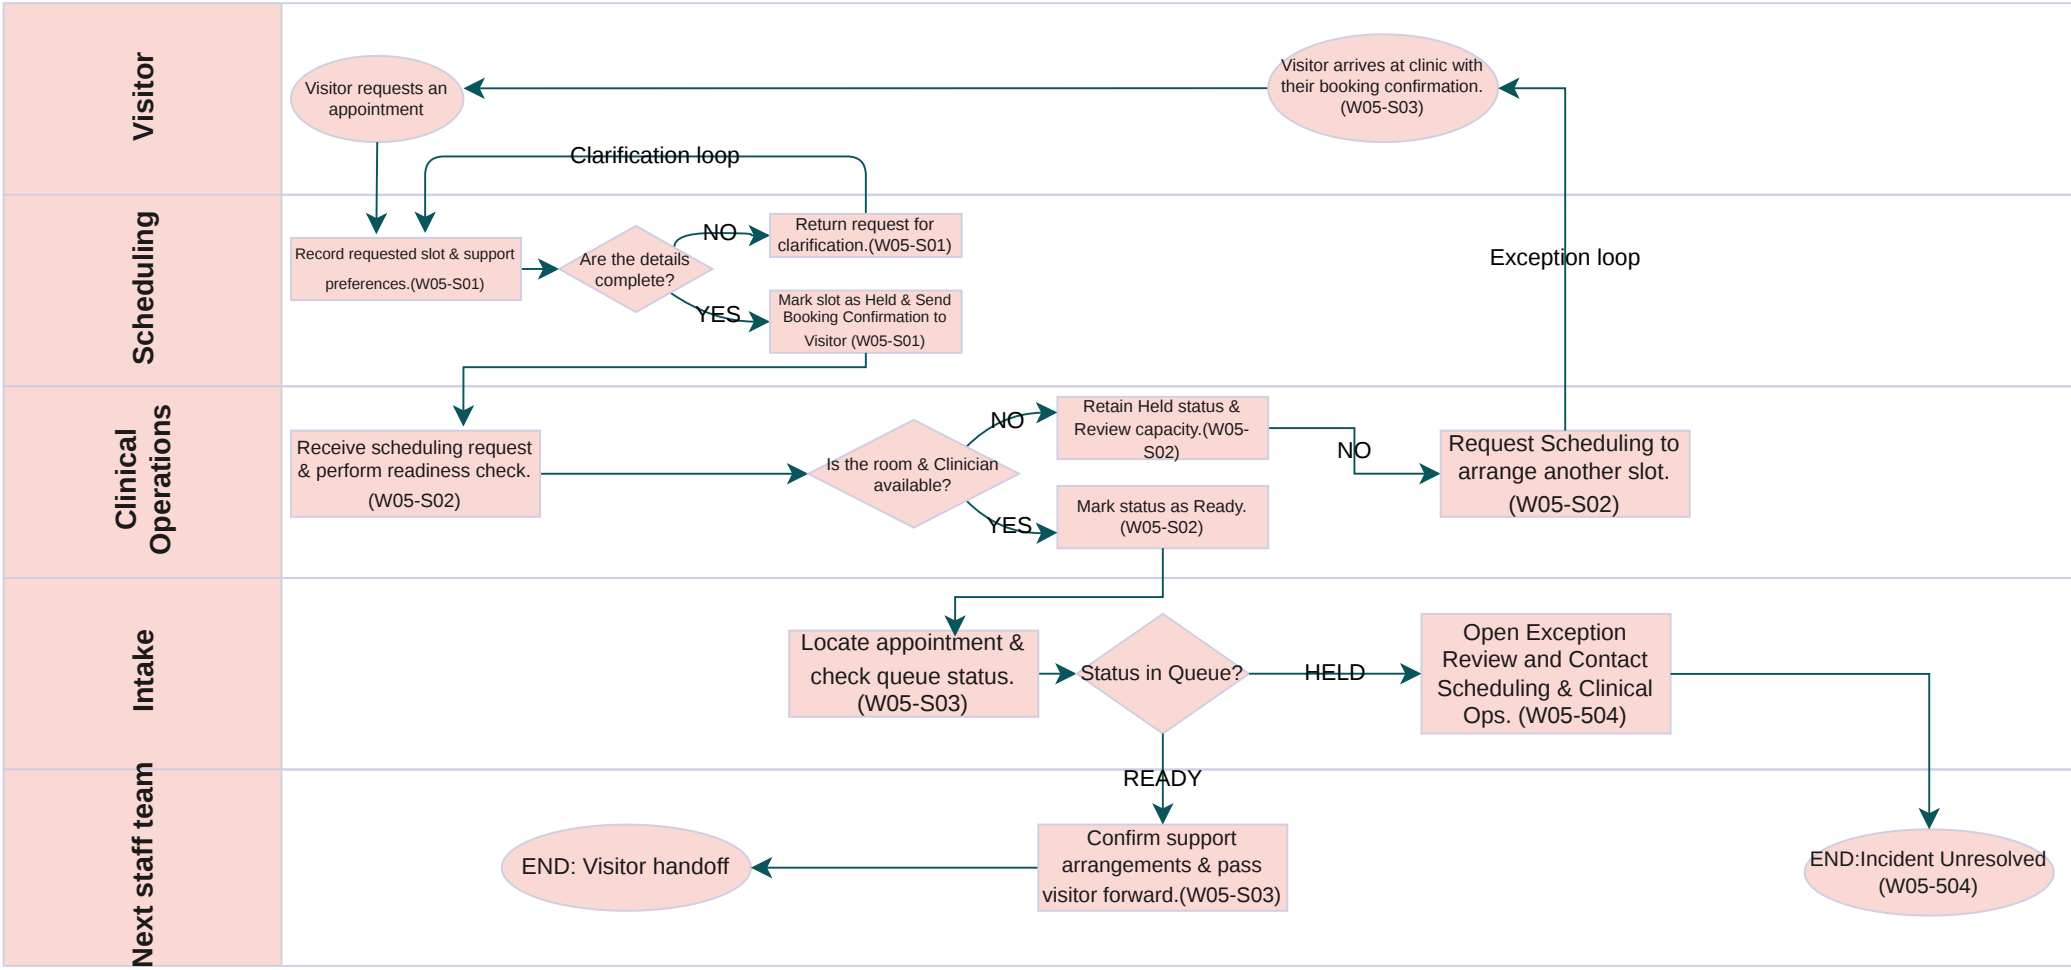
# CIT 140 · Week 5 | Current Appointment Process

This diagram tracks the complete visitor appointment flow from the initial request through scheduling to intake handoff and exception handling.



# Week 5 | Scope and Findings

**1 · Process scope**
Nzubechi Anyanwu. **Process Purpose:** Map the appointment handling workflow from initial visitor request to intake readiness and exception handling. **Start:** Visitor submits an appointment request. **End:** Successful Visitor Handoff for normal path or Unresolved Incident / Gap for exception path. **Included Roles:** Visitor, Scheduling, Clinical Operations, Intake, Next Staff Team. **Outside Scope:** Long-term patient record archival, billing and payment processing, and external provider referrals.

**2 · Check the two paths**
Normal Path: Steps 1 to 5 show a visitor asking for a slot, staff checking the form, holding the time, Clinical Operations approving it, changing the status to Ready, and handing off the visitor. Issue Path: Source W05-S04 shows a visitor arriving while their status is still Held because Clinical Operations did not make a final decision. What We Cannot Prove: The records do not show if Clinical Operations forgot to approve it or if the computer system failed.

**3 · Evidence and model review**
W05-501 supports the request step. W05-S02 supports Clinical Operations checking the slot. W05-S03 supports changing the status to Ready. W05-S04 supports front desk review for Held status. Corrections: Added a loop to fix bad form data and a loop to fix schedule conflicts. Remaining Question: We do not know who was responsible for the missing decision, which requires checking system logs or asking the manager.

**4 · Learning reflection (reuse your Discord paragraph)**
Mapping this process made it clearer that a booked appointment is not automatically ready for a visitor. However, source W05-S04 leaves responsibility unclear because Clinical Operations does not decide visitor readiness before arrival, and the trace fails to show who must complete the decision before intake. The front desk just gets a visitor whose status is marked as "Held". Unlike Week 4 which only listed the required steps, Week 5 uses process modeling to map out the complete workflow from start to finish.

**5 · Portfolio evidence**
[Editable model filename and Week05/Evidence/Week05_Discord_Post.png or .jpg. If Discord is unavailable, identify the equivalent reflection used here.]
