CIT 140 · Week 4 · Cedar Junction

Validated Requirements Set

Cedar Junction Systems Analysis Requirements Report · Revision 68

R-01 · functional

Requirement: The system must show a held time slot and a ready visitor as two different states.

Source: W04-S01 · Dana Ruiz

Rationale: "Held" means two different things in different departments, which causes confusion

Acceptance check: Given a time slot is waiting for confirmation and a visitor is waiting at intake, when staff view the system screen, then the system shows two clearly different states

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: The system must clearly distinguish a scheduling slot waiting for confirmation from an intake visitor who has arrived but cannot move forward.

R-02 · functional

Requirement: The system must show which condition applies, who changed it, and the next approved step when status is unclear.

Source: W04-S01 · Dana Ruiz

Rationale: Staff need this information so they do not have to call around while the visitor waits.

Acceptance check: Given a status is unclear or an exception happens, when staff check the system, then the system displays the specific condition, who changed it, and the next approved step.

Priority: Must · **Validation:** Confirmed by Dana Ruiz

Conflict or decision: The system must clearly distinguish a scheduling slot waiting for confirmation from an intake visitor who has arrived but cannot move forward.

R-03 · business

Requirement: The system must check that a room and a doctor are ready before offering a same-day time slot.

Source: W04-S02 · Dr. Lena Okafor

Rationale: An open spot on a calendar does not mean the room and doctor are actually ready.

Acceptance check: Given an open time slot has no ready room or doctor, when staff try to offer the same-day slot, then the system blocks the offer until both are ready.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A same day slot cannot be offered or promised until both a room and a qualified clinician are actually available.

R-04 · functional

Requirement: The system must send an update to staff and visitors if appointment readiness changes after it is confirmed.

Source: W04-S02 · Dr. Lena Okafor

Rationale: People only need the simple facts they need to take action without extra medical details.

Acceptance check: Given appointment readiness changes after confirmation, when the update runs, then the system sends a notice with the new info to the staff and visitor.

Priority: Must · **Validation:** Confirmed by Dr. Lena Okafor

Conflict or decision: A same day slot cannot be offered or promised until both a room and a qualified clinician are actually available.

R-05 · user

Requirement: Authorized staff must be able to view language, communication, and approved support needs through confirmation, rescheduling, and check-in.

Source: W04-S03 · Priya Shah

Rationale: Visitors should not have to repeat their communication needs after arriving because intake could not see what the access team saw.

Acceptance check: Given a visitor has saved communication preferences, when authorized staff view the appointment during confirmation, rescheduling, or check-in, then the system shows those preferences clearly.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Language, communication, and approved support needs must remain visible to authorized staff through confirmation, rescheduling, and check-in without forcing the visitor to repeat them.

R-06 · constraint

Requirement: The system must provide an equivalent phone or staff-assisted route as an alternative to the visitor portal.

Source: W04-S03 · Priya Shah

Rationale: Service access cannot depend on only one digital channel.

Acceptance check: Given a visitor cannot use the digital portal, when they ask for service by phone or staff help, then the system provides an equivalent way to complete the task.

Priority: Must · **Validation:** Confirmed by Priya Shah

Conflict or decision: Language, communication, and approved support needs must remain visible to authorized staff through confirmation, rescheduling, and check-in without forcing the visitor to repeat them.

R-07 · nonfunctional

Requirement: The system must show only the minimum status info staff need for their specific task on shared displays.

Source: W04-S04 · Jordan Kim

Rationale: Shared displays should not expose unneeded details, and detailed access must follow staff roles.

Acceptance check: Given staff view a shared display, when they look at an appointment status, then the system shows only the minimum information required for their task.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays must show only the minimum information staff need for their tasks based on their roles, and the system must retain a complete audit history showing who made the change, the previous value, the new value, and the time of change for exception reviews.

R-08 · functional

Requirement: The system must keep a history showing who made a change, the previous value, the new value, and the time of change.

Source: W04-S04 · Jordan Kim

Rationale: Reliable history is needed so staff can review it during an exception.

Acceptance check: Given an appointment status changes, when staff check the audit history during an exception review, then the system displays who made the change, the old value, the new value, and the time.

Priority: Must · **Validation:** Confirmed by Jordan Kim

Conflict or decision: Shared displays must show only the minimum information staff need for their tasks based on their roles, and the system must retain a complete audit history showing who made the change, the previous value, the new value, and the time of change for exception reviews.

Professional Guidance Assessment

IIBA: IIBA is a professional association that provides the broad business-analysis backbone for the course, covering needs, stakeholders, requirements, design, and evaluation.

ISO/IEC/IEEE 29148: Together, they publish ISO/IEC/IEEE 29148, which serves as the official professional requirements-engineering reference used for quality and traceability.

PMI: PMI focuses on project delivery and planning, while Week 4 focuses specifically on business analysis, requirements elicitation, and validation standards.

Application: The guidance helped me make requirement R-01 more clear, traceable, and checkable by connecting the wording directly to Dana Ruiz's intake exception record.

Prepared in Command Nexus. Canvas remains the official submission point.
